

Anurag Deshmukh

+91 8432662366 | anuragdeshmukh2575@gmail.com | GitHub | LinkedIn | LeetCode | Pune, India

EDUCATION

Vishwakarma Institute of Technology

Bachelor of Technology in Computer Science (Artificial Intelligence); CGPA: 8.6

Pune, India

July 2023 – July 2027

TECHNICAL SKILLS

Languages: Java, C++, SQL

Backend: Spring Boot, REST APIs

Frontend: React, HTML5, CSS3

Databases: MySQL, MongoDB, PostgreSQL

Developer Tools: Git, GitHub, Postman, IntelliJ IDEA, VS Code, Linux

Testing: JUnit 5, Mockito

DevOps / Cloud: Docker, AWS

PROJECTS

BlogSphere [GitHub] | *Spring Boot, React, PostgreSQL, RabbitMQ*

- Developed a full-stack blogging platform with RESTful APIs for managing users, posts, comments, categories, and other core blogging operations.
- Implemented secure authentication and role-based authorization using Spring Security and JWT-based access and refresh tokens.
- Integrated RabbitMQ for asynchronous event-driven processing, enabling decoupled communication between backend components for post-related operations.
- Built a responsive React frontend with blog creation, editing, browsing, search, and user-focused content management features.

MediaHub | *Spring Boot, React, PostgreSQL, Elasticsearch, Redis*

- Building a full-stack media discovery and review platform to support multiple media types, ratings, follows, and personalized tracking lists.
- Modeling a relational database with complex one-to-many and many-to-many relationships to support reviews, ratings, and user-generated content at scale.
- Implementing full-text search with Elasticsearch and Redis-based caching for trending/recommendation features, with JWT/OAuth2 authentication planned for secure user access.

Developer Portfolio [Live] | *React, JavaScript, HTML, CSS*

- Designed and deployed a responsive personal portfolio showcasing technical skills, projects, education, and development experience through an interactive web interface.
- Built reusable React components and responsive layouts with structured navigation to deliver a clean, accessible experience across different screen sizes.
- Integrated project showcases, technical skill sections, and external links into a production-deployed application hosted on Netlify for public access.

Super-Resolution Image Generator [Live] | *PyTorch, ESRGAN, React.js*

- Developed an image super-resolution system using ESRGAN (RRDB-based generator with relativistic discriminator) to upscale low-resolution images by 2x, 4x, and 8x with enhanced perceptual detail.
- Trained the model on the DIV2K dataset with PyTorch and CUDA acceleration, combining pixel-wise L1, VGG19-based perceptual loss, and adversarial loss to balance pixel accuracy with visual realism.
- Built a Flask REST API for asynchronous image-enhancement jobs and a React.js frontend with drag-and-drop upload, live processing status, and side-by-side PSNR/SSIM quality comparisons.

HONORS AND AWARDS

Solved 500+ Data Structures and Algorithms problems on LeetCode

Certificate of Project Completion, Rubescape – Rubescape Certificate

IBM Full Stack Software Developer Certification – IBM Certification
